

“Reviews of Perinatal care have consistently pointed to failures of communication and poor documentation as the most common factors in adverse events ... They are also the prime factors leading to malpractice claims.”

- IHI Perinatal Findings Report

A life-changing moment. An awesome responsibility.

Perinatal care carries with it a tremendous level of responsibility. Adverse events during labor can have devastating physical, psychological and financial consequences on the child, family and clinicians. It is with this understanding that we at CliniComp, Intl. dedicate ourselves to providing the industry’s most comprehensive clinical solutions.

Essentris® Perinatal®

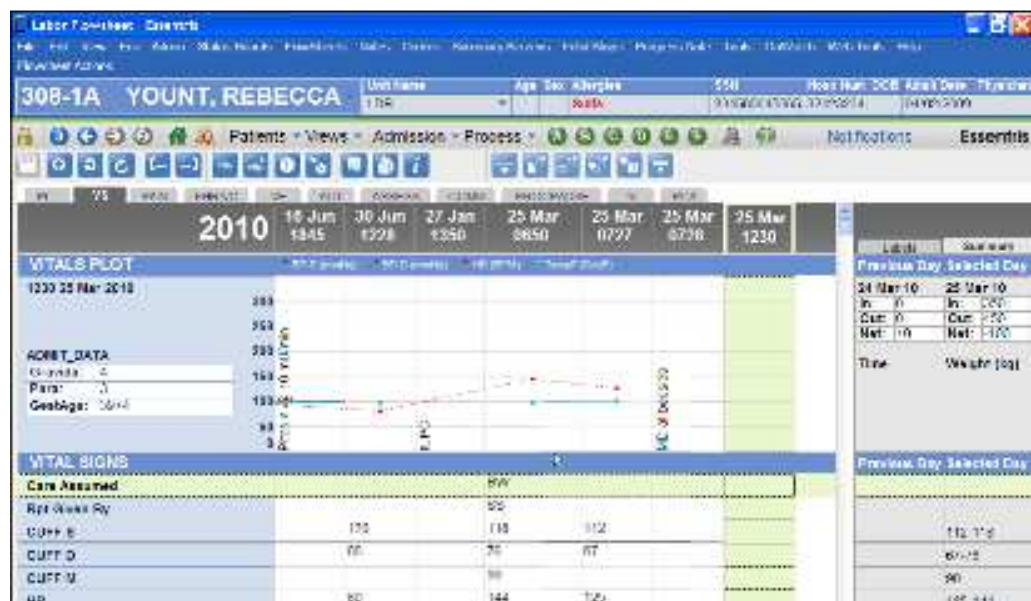

CliniComp’s *Essentris Perinatal* solution is designed to manage clinical workflow across the entire continuum of perinatal care, from antepartum through postpartum and Neonatal (Level 3) ICU. It provides integrated modules for fetal surveillance, maternal charting and NICU management. Built on the award-winning *Essentris* platform, *Essentris Perinatal* is an interdisciplinary, hospital-wide charting and surveillance solution.

Essentris Benefits

- Seamlessly monitor mother and baby status from in-room and remote locations
- Ensure effective communication and workflow across the entire care team
- Deploy consistent, reliable clinical processes across the continuum of care
- Capture all required documentation for compliance and legal requirements

Be Live in Weeks, Not Years

The *Essentris Perinatal* solution provides both the hardware and software necessary to deploy a comprehensive solution in as little as 90 days. Providing all the tools necessary for implementing a central documentation system, it seamlessly links fetal monitors with other bedside devices and integrating ancillary systems.

Essentris fetal strip

Comprehensive Perinatal Charting & Communication

Built with an understanding of the speed and accuracy with which clinicians must work, *Essentris Perinatal* provides a comprehensive charting solution designed specifically to support Perinatal and NICU processes.

Fetal Monitoring Remote Display

Display multiple patients simultaneously in real time from a central station or from any bedside, with audible and visible alarms of fetal bradycardia and tachycardia. Electronic capture of fetal strips allows annotation directly on the strip as well as automatic storing and archiving of valuable fetal data.

Longitudinal Mother and Baby Records

The system captures and links all episodes of care throughout the process and automatically generates and cross references baby charts and records at the time of birth.
