CliniComp Clinical Documentation System Demonstrates Strong Market Penetration as Economic Stimulus Bill Further Increases Demand

Interoperable Charting and Surveillance System Provides Critical Patient Data at Point-of-Care to Improve Patient Safety and Quality

HIMSS 2009 Annual Conference

SAN DIEGO—April 7, 2009--CliniComp Intl., a leading provider of enterprise-wide EMR systems specializing in high acuity intelligent charting and surveillance, announced today its continued market expansion with the deployment of 19 military and commercial client sites -- for a total of 3,000 beds, approximately 12,000 users and 250,000 patients -- from March 2008 through April 2009.

Despite the economic recession during the past year, CliniComp signed significant software contracts with new and existing clients including:

- Baptist Health South Miami (Miami, Fla.)
- Baptist Health Homestead (Homestead, Fla.)
- Baptist Hospital (Miami, Fla.)
- Blanchfield Army Community Hospital (Fort Campbell, Ky.)
- Carl R. Darnall Army Medical Center (Fort Hood, Texas)
- Dwight D. Eisenhower Army Medical Center (Fort Gordon, Ga.)
- Evans Army Community Hospital (Fort Carson, Colo.)
- Moncrieff Army Community Hospital (Fort Jackson, S.C.)
- Reynolds Army Community Hospital (Fort Sill, Okla.)
- Tenet - Cypress Fairbanks Medical Center (Houston, Texas): Fetal Surveillance
- Tenet - Hilton Head Regional Medical Center (Hilton Head, N.C.)
- Tenet - Houston Northwest Regional Medical Center (Houston, Texas)
- Tenet - Los Alamitos (Los Alamitos, Calif.): Fetal Surveillance
- Tenet - Los Alamitos (Los Alamitos, Calif.): Documentation
- Tenet - NorthShore Regional Medical Center (Slidell, La.)
- Tenet - Sierra Medical Center El Paso (El Paso, Texas)

(more)

- Tenet - Sierra Providence Eastside (El Paso, Texas)
- Tenet - Sierra Vista Regional Medical Center (San Louis Obispo, Calif.)
- Winn Army Community Hospital (Fort Stewart, Ga.)

“President Obama's directive to improve the efficiency, safety and quality of care by ensuring that clinicians have secure and efficient access to complete patient information has accelerated hospitals' and integrated delivery networks' plans for EHR and related technology deployments,” said Alan Portela, CliniComp chief operating officer. “With an average implementation time of 12 weeks, our inpatient clinical documentation solutions enable healthcare providers to quickly qualify for stimulus funding, allowing them to maximize the total potential receipt of those deadline-restricted funds.”

Added Portela, “We continue to experience strong demand from our military hospitals, commercial hospitals, and integrated delivery networks for our enterprise clinical systems. As a high-acuity solution provider, we supply flexibility and scalability through our open systems architecture that allows organizations to maximize their existing technology investment and eliminate over-reliance on a single EMR vendor while ensuring interoperability with future HIS systems.”

About CliniComp

San Diego-based CliniComp is a global provider of world-class clinical documentation systems specializing in high-acuity intelligent charting and surveillance. Building upon its 25-year history, CliniComp was the first to offer an intelligent clinical documentation system that delivers 100 percent uptime automating complex hospital environments. The Essentris enterprise solution maximizes existing technology investments by leveraging an open systems architecture that eliminates over-reliance on a single EMR vendor and ensures interoperability with future HIS systems. Essentris' use of a single, interdisciplinary, electronic chart enables caregivers to acquire all relevant clinical data while easily accessing a view of the total clinical experience. Its evidence-based decision support driven analysis makes data available whenever and wherever needed throughout the health enterprise. The result is uninterrupted, informed and safer care outcomes and clinical decision-making. Essentris is deployed at over 70 client sites.
