

FOR IMMEDIATE RELEASE

CLINICOMP CELEBRATES 25TH ANNIVERSARY
MARKET LONGEVITY IS EVIDENCE OF STRONG DEMAND FOR HIGH ACUITY NICHE SOLUTIONS

San Diego – Feb. 12, 2009 – [CliniComp, Intl.](http://CliniComp.Intl) announced today it is celebrating its 25-year anniversary as the industry’s leading provider of enterprise-wide clinical documentation systems specializing in high acuity intelligent charting and surveillance. The company credits its strong leadership and performance to its loyal customer base and continuous market demand for critical care solutions from hospital and integrated delivery networks.

“We are very proud of our 25-year heritage as a successful privately held company known worldwide for our vital role supporting hospitals’ highest priorities of improving patient safety and care quality,” said Alan Portela, CliniComp chief operating officer. “More than two decades ago, CliniComp began a journey as the first to define and build an intelligent clinical documentation system that delivers 100 percent uptime automating complex hospital environments, and today we continue to deliver high performance, scalable solutions and expertise that hospitals need to ensure that tangible performance goals and promised savings are obtained.”

“We at CliniComp also want to express our sincere appreciation to our loyal customers who reaffirm our strong commitment and high standards to providing high quality solutions that make a profound difference in patient care and the work lives of our diverse clinician users,” he continued. “We owe our success to forward-thinking clinicians, healthcare executives and others who fully understood the need for high performance, redundant architecture with no downtime.”

Today, after 25 successful years, hospitals and integrated healthcare organizations of all sizes, worldwide, covering millions of lives are using CliniComp solutions. CliniComp’s loyal client base includes long-standing customers UCLA Healthcare, Tenet Healthcare, Tripler Army Medical Center, VA North Texas Health Care System in Dallas, Walter Reed Army Medical Center, The Ohio State University Medical Center, and Baptist Health South Florida, to name a few.

“Our outstanding performance indicates that high acuity clinical solutions will remain highly sought after despite a tough economy and plummeting healthcare IT budgets. Many providers have delayed replacing legacy electronic medical record (EMR) systems, but are still committed to implementing intensive care unit, labor and delivery, emergency department and other high acuity care solutions that comprise CliniComp’s suite of products,” noted Portela. “Hospitals prioritize specialty systems due to their domain expertise and tremendous impact on patient safety, efficiency, and patient outcomes. Additionally, providers realize that CliniComp’s interoperable niche solutions will maximize their existing technology investment by leveraging an open systems architecture that eliminates over-reliance on a single EMR vendor and ensures interoperability with future HIS systems.”

CliniComp’s Essentris is a multidisciplinary system consisting of intelligent clinical documentation and decision support tools for hospitals with acute care specialties and complex environments, including military facilities, academic medical centers and integrated delivery networks. The product suite enhances workflow across all care providers and departments, and provides a foundation for a true longitudinal patient record.

About CliniComp

CliniComp is a global provider of world-class clinical documentation systems specializing in high acuity intelligent charting and surveillance. Building upon its 25-year history, CliniComp was the first to offer an intelligent clinical documentation system that delivers 100 percent uptime automating complex hospital environments. The Essentris enterprise solution maximizes existing technology investments by leveraging an open systems architecture that eliminates over-reliance on a single EMR vendor and ensures interoperability with future HIS systems. Essentris’ use of a single, interdisciplinary, electronic chart enables caregivers to acquire all relevant clinical data while easily accessing a view of the total clinical experience. Its evidence-based decision support driven analysis makes data available whenever and wherever needed throughout the health enterprise. The result is uninterrupted, informed and safer care outcomes and clinical decision-making. Essentris is deployed at over 70 client sites.
