

FOR IMMEDIATE RELEASE

CLINICOMP INTL SELECTED AS INPATIENT CLINICAL DOCUMENTATION SOLUTION PROVIDER FOR MILITARY HEALTH SYSTEM

New contract adds 36 military treatment facilities, significantly expanding current CliniComp system installations for the Department of Defense

San Diego – Sept. 10, 2009 – CliniComp Intl., a global provider of enterprise-wide clinical documentation systems specializing in high acuity documentation and surveillance, announced today a new contract with the Department of Defense (DoD) to deploy its *Essentris*® inpatient clinical documentation solution, in 36 additional military treatment facilities (MTFs). The new contract more than doubles CliniComp's current installations for the DoD, expanding the company's role as the DoD-wide provider of inpatient clinical documentation solutions for the clinical areas of the Military Health System (MHS) across the Army, Navy and Air Force. The *Essentris* solution deployment is expected to be completed within 18-24 months. CliniComp is currently completing an initial installation under this contract in each of the Army, Navy, and Air Force health services to meet a September 30th Congressional mandate.

"This is the first time an integrated delivery network this large has standardized -- throughout all clinical areas -- on one clinical system," said Alan Portela, CliniComp chief operating officer. "More than two decades ago, CliniComp was the first to offer an intelligent, inpatient clinical documentation system that delivers 100 percent uptime for complex hospital and health system environments such as those that exist within high acuity care areas, and we continue to deliver high performance, scalable solutions that meet the needs of our commercial and government customers. This award further validates not only our strong performance in our existing installed base within the Military Health System (MHS), but also highlights the continued success in our efficient implementation and deployment processes."

CliniComp's *Essentris* system is a multidisciplinary suite of solutions comprised of intelligent, inpatient clinical documentation; computerized physician order entry (CPOE); and decision support tools for hospitals with both low and high acute care specialties and complex environments including military treatment facilities, academic medical centers and integrated

delivery networks. The CliniComp system streamlines clinical workflows and simplifies access to unified patient data. Through this data integration, the company's technology contributes toward building a true longitudinal patient health record.

Adds Portela, "The Department of Defense consistently leads the industry in technology adoption to ensure delivery of high quality care and patient safety. Many commercial health systems will be looking to them for guidance as they follow the steps outlined within the American Recovery & Reinvestment Act of 2009 (ARRA) for EHR and supporting healthcare technology deployments."

"With CliniComp's commitment to providing secure access to vital patient data across the MHS' complete care continuum, this award moves the DoD one step closer to realizing a comprehensive approach in the care delivery for our wounded warriors," says Portela. "As a company – and as a country – we want to continue to support and improve care for our wounded warriors. With CliniComp as the standard for inpatient clinical documentation across the MHS, we are ready and able to ensure that the medical records of wounded warriors accompany them from the battlefield to the hospital to their safe discharge."

About CliniComp, Intl.

San Diego-based CliniComp is a global provider of enterprise clinical documentation systems proven to improve the efficiency and safety of health care providers' highest-acuity workflows. The *Essentris*® enterprise suite comprise integrated electronic charting, reporting and surveillance solutions for acute, critical, emergency and perinatal care built on an open systems architecture and delivering 100 percent uptime. The *Essentris* suite supports over 57 percent of military health system inpatient beds as the inpatient solution for AHLTA and has supported patient care at leading health care systems such as VA North Texas Health Care System, UCLA Health System and Tenet Healthcare throughout the country for over 25 years.
